

Trevor Phillips Sees The Light – Or Does He?

By **Alexander Baron** - Mar 25, 2015

The much hyped documentary by Trevor Phillips: *Things We Won't Say About Race That Are True*, didn't go down too well with the liberal elite, like his comments on sexual predators; the *Independent* **compared the failure** of the authorities to act against Asian grooming gangs with their failure to investigate (mythical) paedophile rings in care homes.

Phillips should be given credit for grasping the nettle and admitting both to himself and the world that people like him were wrong for decades. There is no apology though for the shaming, blackmailing, brainwashing and at times bully boy tactics that have been used against generations of white Britons for thinking what at last he dares to say.

Among those he spoke to was Nigel Farage, who said likewise there are things that cannot be said, even though they are true; he spoke too to Tony Blair, a man who professes his contempt for racial prejudice, yet has so much innocent blood on his hands – white and non-white.

So what did Phillips himself say? Different races have different patterns of wealth distribution, employment, offending, and doubtless talents. Two of America's finest economists, Thomas Sowell and Walter Williams – both of them black – told us that three decades and more ago.

What doesn't Phillips say? There is absolutely nothing here about what those on the far right call the bloodless genocide, because as we all know, race is a social construct rather than a biological reality, a self-evident fact. Likewise everybody knows that a cat born in a stable is really a horse.

Phillips blames his conversion to a partial racial realism on the 7/7 bombings, which were the work of Islamist fanatics. Sorry Trevor, but Islam is not a race. Having said all that, he should at least be given credit for admitting he was wrong, which is something the comrades of the misnamed anti-*racist* movement have never done and never will do.
