If you haven't heard of Freddy Moore, here is a clue: his second wife kept his name after their divorce way back in 1985, and she is now an A List actress. That's right, he was the first husband of **Demi Moore**.

According to the man himself, they met when she was a teenager, and appears to have been quite obsessed with him. He was some 12 years her senior but was married at the time. However, he was soon divorced, and the two married. Alas, her obsession soon ended, and they were divorced in 1985 although she used his surname as her stage name, having by that time broken into films in a small way.

A little known fact about Demi Moore is that she could have become a songwriter. Her first husband was supportive of her acting aspirations but told her longevity lay in working behind the scenes, writing, producing etc. He encouraged her to write songs with him; the result was that they collaborated on three songs, one of which, *It's Not A Rumor*, was reasonably successful.

While his ex-wife went on to achieve super stardom, Freddy faded into obscurity. Having said that, he has produced a fair body of work. He quit the music business at one point but as recently as 2011 he was performing as an acoustic duo with Dennis Peters.

He has on occasion spoken about his ex, and has never said anything detrimental about her. What else can be said about him? Well, some people in the music business are not very nice, as Rihanna discovered when *she dated Chris Brown*, but Freddy Moore appears to be a genuinely nice guy, so we can only wish him well on officially becoming a pensioner.
